

2 Accu-Cast™ Finger Casting Kit Instructions-

This isn't a difficult process, but following the instructions is highly recommended.

This kit uses our 380-CC "color-changing" alginate. It mixes up bright pink and then fades to white. It will turn completely white about 45 seconds BEFORE it "sets".

Alginate won't stick to non-porous surfaces like skin and countertops, but will stick to clothes and carpet.

Finger Cast with Photo

Gold Paint Not Included

Kit Contents

What You Need...

	<p>1 Holding Blue Card Hold card at the line with at least 1/4 inch of card sticking out past fingers AND thumb.</p>		<p>2 Practice Practice Put the card and fingers into the cup so the card IS touching the bottom of the cup- but the fingers are NOT touching the bottom of the cup or the sides.</p>
	<p>4 Mix the Molding Powder Measure 1 3/4 cups 80°F water. Pour water into the bag marked (A) You have about 3 minutes TOTAL time before the alginate "sets".</p>		<p>5 Straighten the bag so it's as tall as it can be...</p>
	<p>6 Squish all the Air out of bag. Stretch so there's no air in the bag- just powder and water. Hold top of bag very tight.</p>		<p>7 Mash and Roll Hold bag tight at top. Lay bag on table. Squish and Roll for 1 minute- vigorously. Don't rip bag with big rings.</p>
	<p>8 Squish the alginate down to the bottom of the bag. When cutting the bottom corner of the bag (step 8), keep a tight grip on the top of the bag.</p>		<p>9 Set bag on table and Cut the bottom corner of the bag. Don't forget- Keep squeezing the top of the bag closed.</p>
	<p>10 Pouring into Cups Fill each cup about 3/4 of the way up.</p>		<p>10 Fingers into the Cups Don't touch the sides of the cup with your fingers.</p>

11 Push all the way down.
Card should touch bottom but NOT FINGERS. Also don't touch the inside of the cup with fingers.

12 Material will change color from pink to white. When material is set (firm) remove fingers by wiggling and pulling. Leave the card inside.

13 Clean up the edges of the cup with your finger. Remove all the extra alginate.

14 Mix the Stone
Measure out 6 fluid ounces of cool water.
Pour water into the bag marked **(S)**

15 Pull bag tight, squish out the air, and mix like you did for bag A.

16 Get Bubbles out of Stone
Hold bag as shown and lightly bounce bag up and down on your table 25 times.

17 Cut bottom corner of bag with scissors like you did for bag A.

18 Squish LiquiStone into the cups slowly. Pour NEXT TO the holes and allow the stone to slide into the holes. This helps reduce air bubbles.

19 Tap Tap Tap on the sides of the cups to help get more air bubbles out. Tap about 25 times. Have the kids help....

20 Wait one hour.
Turn cup over and remove alginate and LiquiStone from the cup.

21 Peel the alginate Off the stone casting. Don't rush this. You don't want to break fingers off the casting. The stone will continue to harden for 48 hours.

22 Take off all the alginate. You might need a toothpick to get alginate out of the small nooks.

23 Remove the blue card. Pull and twist gently until it comes out.

24 Put a picture in the space between the fingers and thumb.
Wait 2 days before painting cast. Don't put paint on the casting too thickly or you will cover all the details.
